Focus is the most valuable resource you lose without noticing

The cost of distraction is higher than you think

23min

To regain focus

After a single distraction, it takes 23 minutes to return to deep work

78%

Pseudo-work time

Of the workday is lost to context switching and shallow tasks

4×

Slower without focus

Tasks take 4x longer when done without deep concentration

0

Real-time tools

Existing solutions can't detect focus loss in real-time

The Attention Leakage Problem

Most productivity tools manage tasks, not attention. They show what you planned to do, not whether you actually stayed focused. The result? Hours of "work" that produce minimal results, with no visibility into where your focus actually went.

✗ Calendars show scheduled time, not focused time

✗ To-do lists track completion, not efficiency

✗ Time trackers count hours, not quality

✗ No tool detects the moment you drop focus

Most productivity tools manage tasks — not attention

What existing solutions miss about focus and deep work

Calendar

Shows what's scheduled, but can't tell if you stayed focused during those times

LIMITATION

No focus tracking during events

To-Do Apps

Tracks task completion, but not the quality or efficiency of your work

LIMITATION

Can't measure focus quality

Pomodoro

Requires manual discipline and assumes optimal focus windows

LIMITATION

Rigid time blocks, no adaptation

Time Trackers

Counts hours spent, but can't detect when you lost focus

LIMITATION

No real-time focus detection

The Critical Gap

None of these tools can detect the exact moment when your productive day starts to fragment. They track time, tasks, and schedules — but they can't see when your attention drifts away.

Slower without focus

NazarApp gives lost focus hours back — automatically

Real-time AI detection that works in the background to restore your productivity

Real-time Focus Detection

AI analyzes attention patterns in real-time, detecting the exact moment when your focus drifts away from the task at hand.

✓ Instant detection

✓ 3+ min threshold

✓ Visual alerts

Restores Deep Work

Gently brings you back to deep work before the day drifts away, preventing productivity loss from distractions.

✓ Smart nudges

✓ Context awareness

✓ Focus recovery

Shows Productivity Patterns

Reveals your peak focus hours, distraction triggers, and weekly trends to optimize your schedule.

✓ Peak hours

✓ Distraction analysis

✓ Trend tracking

Turns Thinking into Data

Transforms subjective feelings about productivity into concrete, actionable insights you can act on.

✓ Quantified focus

✓ Actionable insights

✓ Progress tracking

Get started in under 3 minutes

Four simple steps to regain your productive hours

What you see in week one

In 7 days, you start seeing what used to disappear between tasks

Peak Focus Hours

Discover your most productive hours by day and optimize your schedule around them.

- ✓ Identify your best focus times
- ✓ Optimize daily schedule

Top Distractions

Learn which apps, websites, or activities most frequently break your concentration.

- ✓ Track distraction sources
- ✓ Reduce interruptions

Failure Zones

Identify daily and weekly patterns where your focus consistently drops.

- ✓ Spot recurring patterns
- ✓ Address weak points

Deep Work Trends

Track your progress in deep work hours over time to see improvement.

- ✓ Monitor focus duration
- ✓ Measure productivity growth

What our users say

Trusted by 842+ users worldwide

Dinara K.

UX Designer (Freelance)

“Learned more about myself in a week than in years of work. Turns out my productive hours are 10-12, not all day.”

Timur O.

CTO at Startup

“Tried it with my team — after a month, no one wants to drop it. Dashboard shows who needs a defrag day.”

Alibek N.

Student at KBTU

“Prepared for IELTS. Without the app, I sat for 6 hours and burned out. Now 3 hours of real focus — much more progress.”
